Mode of Operation

The Dupline® Master Module is a Dupline® Channel Generator with the function of a slave. This means that the 128 Dupline® I/O's can be read/controlled by a PC/PLC or a Control board master from many different suppliers. Up to

16 Dupline® DMM can be connected to the same network and operate together with other modules using the same protocol like operator panels, MMI's frequency inverters, I/O-modules etc.
